this important book proposes a new account of the nature of language founded upon an original interpretation of wittgenstein the authors deny the existence of a direct referential relationship between words and things rather the link between language and world is a two stage one in which meaning is used and in which a natural language should be understood as fundamentally a collection of socially devised and maintained practices arguing against the philosophical mainstream descending from frege and russell to quine davidson dummett mcdowell evans putnam kripke and others the authors demonstrate that discarding the notion of reference does not entail relativism or semantic nihilism a provocative re examination of the interrelations of language and social practice this book will interest not only philosophers of language but also linguists psycholinguists students of communication and all those concerned with the nature and acquisition of human linguistic capacities

this book presents a mechanist philosophy of mind i hold that the human mind is a system of computational or recursive rules that are embodied in the nervous system that the material presence of these rules accounts for perception conception speech belief desire intentional acts and other forms of intelligence in this edition i have retained the whole of the first edition except for discussion of issues which no longer are relevant in philosophy of mind and cognitive psychology earlier reference to disputes of the 1960 s and 70 s between hard line empiricists and neorationalists over the psychological status of grammars and language acquisition for instance has simply been dropped in place of such material i have entered some timely or new topics and a few changes there are brief references to the question of computer versus distributed processing connectionist theories many of these questions dissolve if one distinguishes as i now do in chapter ii between free and embodied algorithms i have also added to my comments on artifical in telligence some reflections on searle s chinese translator the irreducibility of machine functionalist psychology in my version or any other has been exaggerated input output and state entities are token identical to physical or biological things of some sort while a machine system as a collection of recursive rules is type identical to representatives of equivalence classes this nuld technicality emerges in chapter xi it entails that so called anomalous monism is right in one sense and wrong in another
