Apr 04 2024

□□□ submitted on 19 dec 2013 playing atari with deep reinforcement learning volodymyr mnih koray kavukcuoglu david silver alex graves ioannis antonoglou daan wierstra martin riedmiller we present the first deep learning model to successfully learn control policies directly from high dimensional sensory input using reinforcement

1312 6114 auto encoding variational bayes arxiv org

Mar 03 2024

□□□ 2013□12□20□   we introduce a stochastic variational inference and learning algorithm that scales to large datasets and under some mild differentiability conditions even works in the intractable case our contributions are two fold first we show that a reparameterization of the variational lower bound yields a lower bound estimator that

translating embeddings for modeling multi relational data

Sep 28 2023

□□□ abstract we consider the problem of embedding entities and relationships of multi relational data in low dimensional vector spaces our objective is to propose a canonical model which is easy to train contains a reduced number of parameters and can scale up to very large databases
