Coronary thrombolysis : current answers to critical questions 2013-03 this book aims to present some answers to the most difficult questions presented to clinicians when they see patients with acute coronary syndromes internationally known cardiologists critically appraise the literature and together with their own clinical wisdom and experience of research present an informed view the focus is on the implications for diagnosis prevention and treatment topics already well covered in the standard textbooks have been avoided so that only subjects of real controversy can be explored

Broken Hearts 1995 cardiologists must answer three important questions when evaluating and treating patients with a coronary artery stenosis as a physiologist what is the effect of this stenosis on coronary blood flow and myocardial function as a clinician is this lesion responsible for the patient's symptoms and finally as an interventionalist will revascularization of this artery improve the patient fundamentally the answer to these questions can be given to a large extent by measuring coronary pressure that is the rationale of writing this book 1 1 historical overview andreas gruentzig and most interventional cardiologists in the early days of ptca had the intuitive feeling that pressure measurements could help to establish the severity of a coronary stenosis and to monitor the progress and result of a coronary intervention at that time measuring coronary pressure by the balloon catheter was part of a standard procedure a residual transstenotic gradient of less than 15 mmhg was generally considered as a good result later however it turned out that measuring these resting gradients with balloon catheters was inaccurate and only had a limited prognostic value moreover because there was no consistent theory to correlate pressure

measurements to blood flow the interest in measuring coronary pressures faded and disappeared almost completely with the introduction of new balloon catheters not intended for pressure measurement

Questions from the Heart 2009 what causes hypertension in children is it common for epileptic patients to have post ictal vomiting if so how often does this occur why is the incidence of parkinsonism less common in smokers what is the role of urine examination in diabetic control where do you turn to when you have a difficult medical question that needs answering the ask the author online feature from the best selling textbook kumar clark s clinical medicine has collected a wealth of questions and comments directly from medical students and doctors about topics that are of particular interest or difficulty to them kumar and clark have brought together over 1000 of the questions they have been asked along with their answers it will appeal to the many fans of kumar clark from first year students to practising doctors and will provide a useful and interesting sounding board to help ensure best practice this unique book will provide you with a quick and easy way to discover the answers to your own medical questions the writing style is appealing and conversational designed to entertain as well as instruct carries the kumar clark stamp of authority all questions fully indexed for ease of reference covers topics that are easily misunderstood in medicine good preparation for medical students senior house officers interns and specialists in training residents preparing for written or oral exams
