Polymeric Micelles for Drug Delivery

2022-08-18

polymeric micelles for drug delivery provides a comprehensive overview on the synthesis characterization and application of polymeric micelles in drug delivery applications the use of nanomedicines and carriers such as polymeric micelles has made it possible to deliver drugs genes and therapeutic agents to localized disease sites to maximize clinical benefit while limiting unwanted side effects this book thoroughly reviews the development and application of polymeric micelles for drug delivery covering various polymer types and the synthesis characterization and pharmacokinetics of different micelles subsequent chapters go on to look at the range of drug delivery applications of polymeric micelles such as mucosal and transdermal and the assorted stimuli responsive micelles available the book concludes with an important analysis of the environmental and regulatory aspects associated with micelle development and clinical translation explores how polymeric micelles can be utilized in a range of different drug delivery approaches from traditional oral delivery to ocular and dermal delivery describes the various polymer types used in the synthesis and characterization of polymeric micelles covers recent advances in polymeric micelles such as drug co delivery triblock polymeric micelles delivery of genetic materials and more

Environmental Health Perspectives

2004

the author studies the interaction between the ehp sequence and the goodwillie tower of the identity evaluated at spheres at the prime 2 both give rise to spectral sequences the ehp spectral sequence and the goodwillie spectral sequence respectively which compute the unstable homotopy groups of spheres he relates the goodwillie filtration to the p map and the goodwillie differentials to the h map furthermore he studies an iterated atiyah hirzebruch spectral sequence approach to the homotopy of the layers of the goodwillie tower of the identity on spheres he shows that differentials in these spectral sequences give rise to differentials in the ehp spectral sequence he uses his theory to recompute the 2 primary unstable stems through the toda range up to the 19 stem he also studies the homological behavior of the interaction between the ehp sequence and the goodwillie tower of the identity this homological analysis involves the introduction of dyer lashof like operations associated to m ching s operad structure on the derivatives of the identity these operations act on the mod 2 stable homology of the goodwillie layers of any functor from spaces to spaces

1989

this book gathers the peer reviewed proceedings of the 14th international symposium prads 2019 held in yokohama japan in september 2019 it brings together naval architects engineers academic researchers and professionals who are involved in ships and other floating structures to share the latest research advances in the field the contents cover a broad range of topics including design synthesis for ships and floating systems production hydrodynamics and structures and materials reflecting the latest advances the book will be of interest to researchers and practitioners alike

The Goodwillie Tower and the EHP Sequence

2012

this title was first published in 2000 august jaeger was one of elgar s most devoted supporters and was the subject of one of elgar s most inspired movements the nimrod variation this study explores the correspondence between jaeger and the famous english composer

Water-supply Paper

1938
