Industrial Organization and International Trade 2003 this reader provides a unique mix of american and european contributions to the study of particular markets often combined with a critical evaluation of antitrust regulations decisions or judgments part i explains market structure as a function of sunk costs and market size part ii illustrates the central role of pricing schemes including parallel pricing delivered pricing and competition clauses in sustaining equilibrium outcomes in oligopolistic markets parts iii and iv give a game theoretic foundation to competition policy and merger control louis phlips offers a comprehensive introduction to the text in which he very carefully explains the reasoning behind his choice of papers and provides a superb synthesis of the material particular highlights include the discussion and evaluation of antitrust regulations which involve a

systematic comparative analysis of european and american regulations decisions and judgments in this area

Industrial Organization and Management 1923 la organización industrial trata sobre la interacción estratégica entre empresas cómo toman las decisiones las empresas cuando tienen en cuenta la reacción del resto de empresas el objetivo es comprender mejor la decisión de las empresas y las consecuencias de éstas en la competencia del mercado en el capítulo 2 investigo la interacción estratégica entre cooperación en investigación y desarrollo i d y las fusiones posteriores se presenta un modelo teórico que relaciona redes estables de cooperación en i d con decisiones de fusión seguido por la competición en el mercado de productos el resultado es que las fusiones y la cooperación en i d son complementarias esto significa que hay fusiones que sólo existen porque las empresas construyen ciertas redes de cooperación en i d si las cooperaciones no fueran permitidas

entonces las empresas elegirían no fusionarse otro resultado que obtengo es que hay cooperación entre empresas que no existirían si las empresas no se anticiparan a las posteriores fusiones también encuentro que la cooperación con las empresas que no se fusionan son las relaciones claves contradiciendo la intuición de que las empresas crean relaciones que se sustituirán por una fusión en un estado posterior la consecuencia es que las empresas no fusionadas ganan poder de veto sobre la fusión y sólo permitirán ésta si la empresa resultante de la fusión no es demasiado competitiva en el capítulo 3 presento un modelo para entender mejor cómo compiten las empresas de capital de riesgo con diferente acumulación de experiencia y porque cooperan en los estadios iniciales de la financiación de riesgo considero que la decisión a cooperar la toman las empresas financiadoras pero debe ser aprobado por el dueño del proyecto los resultados dicen que hay ganancias de bienestar resultantes de la cooperación porque las uniones de capitalistas de riesgo evalúan proyectos más efectivamente y proveen servicios con mayor valor añadido cuando se toma en cuenta al empresario los capitalistas de riesgo no pueden apropiarse todas las ganancias derivadas del proyecto el empresario se queda con parte del proyecto porque tiene la alternativa de no fusionarse así que presento un modelo de cooperación sin colusión otro resultado que encuentro es que los proyectos con mayor potencial son más probables de llevar a uniones y que las mayores inversiones no llevan necesariamente a mayor cooperación a través de un análisis empírico realizo un test para comprobar las conclusiones teóricas y obtengo que proyectos con tanto un mayor potencial como una mayor inversión tienen mayor

probabilidad de resultar en una unión de capitalistas de riesgo finalmente en el capítulo 4 se analizan las decisiones de las empresas sobre el momento de entrada de éstas en el mercado específicamente analizo como estas decisiones se ven afectadas por las creencias de las empresas sobre la situación de la demanda y de la competencia otra contribución del artículo es estudiar si las empresas tienen incentivos para distorsionar las creencias y ser más optimistas sobre el estado de la demanda este capítulo considera un modelo de decisión sobre el momento de entrada endógeno con información incompleta sobre la demanda muestro que con empresas bayesianas existe un único equilibrio bayesiano perfecto donde las empresas con creencias optimistas producen en el primer periodo mientras que las empresas con creencias pesimistas sólo producen en el segundo periodo también encuentro que cuando las empresas pueden elegir ser demasiado confiadas eligen no serlo sin embargo les produce una ligera mejora tener la opción de elegirlo
