mystery of the american southwest is the fate of the anasazi the native peoples who in the eleventh century converged on chaco canyon in today s southwestern new mexico and built what has been called the las vegas of its day a flourishing cultural center that attracted pilgrims from far and wide a vital crossroads of the prehistoric world the anasazis accomplishments in agriculture in art in commerce in architecture and in engineering were astounding rivaling those of the mayans in distant central america by the thirteenth century however the anasazi were gone from chaco vanished what was it that brought about the rapid collapse of their civilization was it drought pestilence war forced migration mass murder or suicide for many years conflicting theories have abounded craig childs draws on the latest scholarly research as well as on a lifetime of adventure and exploration in the most forbidding landscapes of the american southwest to shed new light on this compelling mystery

House of Rain 2007-02-22 it is one of the great mysteries in the archaeology of the americas the depopulation of the northern southwest in the late thirteenth century ad considering the numbers of people affected the distances moved the permanence of the departures the severity of the surrounding conditions and the human suffering and culture change that accompanied them the abrupt conclusion to the farming way of life in this region is one of the greatest disruptions in recorded history much new paleoenvironmental data and a great deal of archaeological survey and excavation permit the fifteen scientists represented here much greater precision in determining the timing of the

depopulation the number of people affected and the ways in which northern pueblo peoples coped and failed to cope with the rapidly changing environmental and demographic conditions they encountered throughout the 1200s in addition some of the scientists in this volume use models to provide insights into the processes behind the patterns they find helping to narrow the range of plausible explanations what emerges from these investigations is a highly pertinent story of conflict and disruption as a result of climate change environmental degradation social rigidity and conflict taken as a whole these contributions recognize this era as having witnessed a competition between differing social and economic organizations in which selective migration was considerably hastened by severe climatic environmental and social upheaval moreover the chapters show that it is at least as true that emigration led to the collapse of the northern southwest as it is that collapse led to emigration

2007-01-01 in planet taco jeffrey pilcher traces the historical origins and evolution of mexico s national cuisine explores its

incarnation as a mexican american fast food shows how surfers became global pioneers of mexican food and how corona beer conquered the world pilcher is particularly enlightening on what the history of mexican food reveals about the uneasy relationship between globalization and authenticity the burritos and taco shells that many people think of as mexican were actually created in the united states but pilcher argues that the contemporary struggle between globalization and national sovereignty to determine the authenticity of mexican food goes back hundreds of years during the nineteenth century mexicans searching for a national cuisine were torn between nostalgic creole hispanic dishes of the past and french haute cuisine the global food of the day indigenous foods were scorned as unfit for civilized tables only when mexican american dishes were appropriated by the fast food industry and carried around the world did mexican elites rediscover the foods of the ancient maya and aztecs and embrace the indigenous roots of their national cuisine

archaeologists have long attempted to develop models that will
let them better understand the evolution of human social
organization in our search to understand how chiefdoms and
states evolve and how those societies differ from egalitarian
bands we have neglected to develop models that will aid the
understanding of the wide range of variability that exists
between them this volume attempts to fill this gap by exploring
social organization in tribal or autonomous village societies from
several different ethnographic ethnohistoric and archaeological
contexts from the pre pottery neolithic period in the near east to
the contemporary jivaro of amazonia
