The New Wild 2016-04-05 named one of the best books of 2015 by the economist a provocative exploration of the new ecology and why most of what we think we know about alien species is wrong for a long time veteran environmental journalist fred pearce thought in stark terms about invasive species they were the evil interlopers spoiling pristine natural ecosystems most conservationists and environmentalists share this view but what if the traditional view of ecology is wrong what if true environmentalists should be applauding the invaders in the new wild pearce goes on a journey across six continents to rediscover what conservation in the twenty first century should be about pearce explores ecosystems from remote pacific islands to the united kingdom from san francisco bay to the great lakes as he digs into questionable estimates of the cost of invader species and reveals the outdated intellectual sources of our ideas about the balance of nature pearce acknowledges that there are horror stories about alien species disrupting ecosystems but most of the time the tens of thousands of introduced species usually swiftly die out or settle down and become model eco citizens the case for keeping out alien species he finds looks increasingly flawed as pearce argues mainstream environmentalists are right that we need a rewilding of the earth but they are wrong if they imagine that we can achieve that by reengineering ecosystems humans have changed the planet too much and nature never goes backward but a growing group of scientists is taking a fresh look at how species interact in the wild according to these new ecologists we should applaud the dynamism of alien species and the novel ecosystems they create in an era of climate change and widespread ecological damage it is absolutely crucial that we find ways to help nature regenerate embracing the new ecology pearce shows us is our best chance to be an environmentalist in the twenty first century means celebrating nature s wildness and capacity for change

Agency and Imagination in the Films of David Lynch 2019-12-13 agency and imagination in the films of david lynch philosophical perspectives offers a sustained philosophical interpretation of the filmmaker s work in light of classic and contemporary discussions of human agency and the complex relations between our capacity to act and our ability to imagine with the help of the pathological characters that so often leave their unforgettable mark on lynch s films this book reveals several important ways in which human beings fail to achieve fuller embodiments of agency or seek substitute satisfactions in spaces of fantasy in keeping with lynch s penchant for unconventional narrative techniques james d reid and candace r craig explore the possibility scope and limits of the very idea of agency itself and what it might be like to renounce concepts of agency altogether in the interpretation and depiction of human life in a series of interlocking readings of eight feature length films and twin peaks the return that combine suggestive philosophical analysis with close attention to cinematic detail reid and craig make a convincing case for the importance of david lynch s work in the philosophical examination of agency the vagaries of the human imagination and the relevance of film for the philosophy of human action scholars of film studies and philosophy will find this book particularly useful

The Deadly Air 2012-08-14 current law regulating wildlife is spread over a collection of acts dating back to 1831 the original purpose of much of the law was to govern activities such as hunting and fishing including poaching over the years it has expanded to conserve certain species ensure the welfare of wildlife and protect local biodiversity from invasive species the result is a legal landscape that is out of date confused and often contradictory much of the older legislation is out of step with modern requirements and the principal modern act the wildlife and countryside act 1981 has been amended to such a degree that it is difficult for any non specialists to use the commission's proposals in this consultation aim to simplify the existing complex framework introducing a single statute which covers the species specific law on the conservation protection and exploitation of wildlife the new regime would reduce the current dependency on criminal law by allowing an appropriate mix of regulatory measures such as guidance advice and a varied and flexible system of civil sanctions such as fines and bans the commission also suggests that the introduction of statutory factors could play a role in ensuring transparent decision making and improve the engagement of those representing competing interests factors would include 1 conservation of the species about which the decision is concerned 2 preservation and conservation of biodiversity 3 economic implications 4 wider social factors and 5 the welfare of those animals potentially affected by the decision
