engaged with cybernetics artificial intelligence and other technologies poured the foundation for digital interactivity in architectural intelligence molly wright steenson explores the work of four architects in the 1960s and 1970s who incorporated elements of interactivity into their work christopher alexander richard saul wurman cedric price and nicholas negroponte and the mit architecture machine group all incorporated technologies including cybernetics and artificial intelligence into their work and influenced digital design practices from the late 1980s to the present day alexander long before his famous 1977 book a pattern language used computation and structure to visualize design problems wurman popularized the notion of information architecture price designed some of the first intelligent buildings and negroponte experimented with the ways people experience artificial intelligence even at architectural scale steenson investigates how these architects pushed the boundaries of architecture and how their technological experiments pushed the boundaries of technology what did computational cybernetic and artificial intelligence researchers have to gain by engaging with architects and architectural problems and what was this new space that emerged within these collaborations at times steenson writes the architects in this book characterized themselves as anti architects and their work as anti architecture the projects steenson examines mostly did not result in constructed buildings but rather in design processes and tools computer programs interfaces digital environments alexander wurman price and negroponte laid the foundation for many of our contemporary interactive practices from information architecture to interaction design from machine learning to smart cities the definitive resource to the signs symptoms and patterns of medical diseases that can present as psychological problems this invaluable reference enables clinicians as well as patients and their families to become more familiar with these medical conditions and how they may masquerade as mental disorders part one of this book is organized so that it corresponds to the sections of the standard mental status exam it is composed of clinical presentation descriptions that direct the reader to the medical diseases described in part two that may be contributing to the patient s discomfort without medical jargon barbara schildkrout lucidly explains how patients with each medical condition may end up seeking help from a mental health professional the conditions explored in this book include alzheimer s disease brain tumors carbon monoxide poisoning diseases of the thyroid endocrine disorders hepatic encephalopathy hiv aids hyperventilation syndrome hypoglycemia limbic encephalitis lyme disease syphilis thiamine deficiency traumatic brain injury the book also describes a proven process for working with patients during and after the referral process and integrating medical findings into ongoing therapeutic work all mental health professionals need access to this information and masquerading symptoms puts it all in a single easily
