the software factory methodology is based on recognition of these similarities and a drive to extend the concept of reusability to the point where we achieve entirely automated product lines based on an analysis and understanding of the common features and techniques of a set of applications a software factory defines a tailored end to end methodology for building these applications at the heart of the software factory methodology is the concept of domain specific languages dsls which in essence are development environments specifically tailored to the set of applications in hand it removes a certain degree of flexibility but greatly enhances productivity by removing a lot of the coding complexity for an analogy consider the use of the now ubiquitous drag and drop controls in winforms or visual basic further in the sf methodology patterns process advice and best practices can be harvested and applied for all applications in the set there are some good books on the theory of sf already on the market up until this point a lot of these concepts were fairly theoretical and abstract
