Frankenstein is a novel written by English author Mary Shelley about eccentric scientist Victor Frankenstein who creates a grotesque creature in an unorthodox scientific experiment. Shelley started writing the story when she was eighteen and the novel was published when she was twenty. Shelley had travelled through Europe in 1814, journeying along the River Rhine in Germany with a stop in Gernsheim, which is just 17 km (10 mi) away from Frankenstein Castle, where two centuries before an alchemist was engaged in experiments. Later she traveled in the region of Geneva, Switzerland, where much of the story takes place and the topics of galvanism and other similar occult ideas were themes of conversation among her companions, particularly her lover and future husband Percy Shelley. Mary, Percy, Lord Byron, and John Polidori decided to have a competition to see who could write the best horror story. Since publication of the novel, the name Frankenstein is often used to refer to the monster itself, as is done in the stage adaptation by Peggy Webling. This usage is sometimes considered erroneous, but usage commentators regard the monster's sense of Frankenstein as well established and an acceptable usage. In the novel, the monster is identified via words such as creature, monster, fiend, wretch, vile insect, daemon, being, and it. Speaking to Victor Frankenstein, the monster refers to himself as the Adam of your labours and elsewhere as someone who would have been your Adam but is instead your fallen angel. A true classic that belongs on every bookshelf.

Mary Shelley, then Godwin, and Percy Bysshe Shelley were visiting their friend Lord Byron in Geneva one rainy summer with the weather against them. They decided to spend their time writing ghost stories for each other. Frankenstein is Mary Shelley's submission to their contest, later published anonymously in 1818. Victor Frankenstein, a strange but brilliant scientist, discovers a method of imparting life to inanimate matter. The monster is thus born, a hideous 8-foot-tall creature of muscle, speed, and intellect. Frankenstein's rejection of his appalling creation sends it into a spiral of despair, and Frankenstein's life is never the same. Considered by many to be the first science fiction novel, Frankenstein is a powerful narrative that explores complex themes of belonging, morality, and the consequences of the power over life and death.

Autobiographical writings have been a major cultural genre from antiquity to the present time. General questions of the literary, as e.g. the relation between literature and reality, truth and fiction, the dependency of author, narrator, and figure, or issues of individual and cultural styles, etc. can be studied preeminently in the autobiographical genre. Yet the tradition of life writing has in the course of literary history developed manifold types and forms, especially in the globalized age where the media and other technological cultural factors contribute to a rapid transformation of lifestyles. Autobiographical writing has maintained even enhanced its popularity and importance by conceiving autobiography in a wide sense that includes memoirs, diaries, self-portraits, and autofiction, as well as media transformations of the genre. This three-volume handbook offers a comprehensive survey of theoretical approaches, systematic aspects, and historical developments in an international

and interdisciplinary perspective while autobiography is usually considered to be a European tradition special emphasis is placed on the modes of self representation in non western cultures and on inter and transcultural perspectives of the genre the individual contributions are closely interconnected by a system of cross references the handbook addresses scholars of cultural and literary studies students as well as non academic readers
