Tutorial fundamentals of real-time photogrammetry 1990 this book deals with the recording modelling and visualization of cultural heritage anthropogenic objects and natural scenes and related processes the areas discussed include data acquisition using a variety of sensors mainly optical sensors and laser scanners platforms and mobile systems data management and spatial information systems 3d modeling and reconstruction visualization and animation virtual and augmented reality including innovative software and hardware systems applications and interdisciplinary projects a central focus is the development of methods for automated data processing the aim of the workshop was to survey recent developments trends and new approaches and to bring together the various heterogeneous groups active in cultural heritage sponsors archaeologists and architects scientists in remote sensing photogrammetry computer vision and computer graphics etc the involvement of these groups representing both producers and users of information allowed a cross fertilisation and a multidisciplinary treatment of the workshop topics this book offers a comprehensive selection of high quality contributions from leading international research institutions and other organisations active in cultural heritage treating theoretical issues as well as projects and applications and representing the cutting edge of this key subject as presented at the workshop organised by the swiss federal institute of technology eth zurich at monte verità ascona switzerland on 22 27 may 2005

Fundamentals of Real-time Photogrammetry 1990 this work is a collection of papers from the world s leading research groups in the field of automatic extraction of objects especially buildings and roads from aerial and space imagery including new sensors like sar and lidar
