over the past century educational psychologists and researchers have posited many theories to

explain how individuals learn i e how they acquire organize and deploy knowledge and skills the 20th century can be considered the century of psychology on learning and related fields of interest such as motivation cognition metacognition etc and it is fascinating to see the various mainstreams of learning remembered and forgotten over the 20th century and note that basic assumptions of early theories survived several paradigm shifts of psychology and epistemology beyond folk psychology and its naïve theories of learning psychological learning theories can be grouped into some basic categories such as behaviorist learning theories connectionist learning theories cognitive learning theories constructivist learning theories and social learning theories learning theories are not limited to psychology and related fields of interest but rather we can find the topic of learning in various disciplines such as philosophy and epistemology education information science biology and as a result of the emergence of computer technologies especially also in the field of computer sciences and artificial intelligence as a consequence machine learning struck a chord in the 1980s and became an important field of the learning sciences in general as the learning sciences became more specialized and complex the various fields of interest were widely spread and separated from each other as a consequence even presently there is no comprehensive overview of the sciences of learning or the central theoretical concepts and vocabulary on which researchers rely the encyclopedia of the sciences of learning provides an up

to date broad and authoritative coverage of the specific terms mostly used in the sciences of learning and its related fields including relevant areas of instruction pedagogy cognitive sciences and especially machine learning and knowledge engineering this modern compendium will be an indispensable source of information for scientists educators engineers and technical staff active in all fields of learning more specifically the encyclopedia provides fast access to the most relevant theoretical terms provides up to date broad and authoritative coverage of the most important theories within the various fields of the learning sciences and adjacent sciences and communication technologies supplies clear and precise explanations of the theoretical terms cross references to related entries and up to date references to important research and publications the encyclopedia also contains biographical entries of individuals who have substantially contributed to the sciences of learning the entries are written by a distinguished panel of researchers in the various fields of the learning sciences

this book focuses on molecular space chemistry which is recognized as an important concept for the design of novel functional materials and catalysts a wide variety of topics and ideas included in this book are based on that concept the book showcases recent representative examples of molecular space design to create functional materials and catalysts possessing unique properties this

unique volume will be of great interest to chemists in a wide variety of research fields including organic inorganic biological polymer and supramolecular chemistry readers will obtain new ideas and directions to create novel functional molecules and those ideas will lead to innovative views of science

dendrimers are a class of highly branched molecules that combine the properties of polymers as well as small discrete molecules one classified among the exotic molecules of chemistry dendrimers have attracted considerable attention in recent years as their unique host guest

properties and their capability of being functionalized in the periphery as well in the core have led to new materials with a great potential for applications this volume presents the state of art in this blossoming research area written by pioneers in the fields covering the synthetic supramolecular stereochemical host guest and polymer chemistry of dendritic and hyperbranched molecules this volume explains both theoretical and practical aspects including chirality reactivity mechanism material properties and biological relevance it is the most comprehensive and authoritative review of the area available

specialist periodical reports provide systematic and detailed review coverage of progress in the major areas of chemical research written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry for over 80 years the royal society of chemistry and its predecessor the chemical society have been publishing reports charting developments in chemistry which originally took the form of annual reports however by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series specialist periodical reports was born the annual reports themselves still existed but were divided into two and

subsequently three volumes covering inorganic organic and physical chemistry for more general coverage of the highlights in chemistry they remain a must since that time the spr series has altered according to the fluctuating degree of activity in various fields of chemistry some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued

this book presents power system analysis methods that cover all aspects of power systems operation utilization control and system management at the beginning of each chapter an introduction is given describing the objectives of the chapter the authors have attempted to present power system parameters in a lucid logical step by step approach in a lucid logical step by step approach in recognition of requirements by the accreditation board for engineering and technology abet on integration of engineering computer tools the authors demonstrate the use of matlab programming in obtaining solutions to engineering power problems matlab is introduced in a student friendly manner and follow up is given in appendix a the use of matlab and power system applications are presented throughout the book practice problems immediately follow each illustrative example students can follow the example step by step to solve the practice problems these practice problems test students comprehension and reinforce key concepts before moving on to the next chapter in each chapter the authors discuss some application aspects of the chapter s concepts using computer programming the material covered in the chapter applied to at least one

or two practical problems to help students see how the concepts are used in real life situations thoroughly worked examples are provided at the end of every section these examples give students a solid grasp of the solutions and the confidence to solve similar problems themselves designed for a three hour semester course on power system operation utilization and control this book is intended as a textbook for a senior level undergraduate student in electrical and computer engineering the prerequisites for a course based on this book are knowledge of standard mathematics including calculus and complex numbers and basic undergraduate engineering courses

presents state of the art information concerning the syntheses of valuable functionalized organic compounds from alkanes with a focus on simple mild and green catalytic processes alkane functionalization offers a comprehensive review of the state of the art of catalytic functionalization of alkanes under mild and green conditions written by a team of leading experts on the topic the

book examines the latest research developments in the synthesis of valuable functionalized organic compounds from alkanes the authors describe the various modes of interaction of alkanes with metal centres and examine the oxidative alkane functionalization upon C-O bond formation they address the many types of mechanisms discuss typical catalytic systems and highlight the strategies inspired by biological catalytic systems the book also describes alkane functionalization upon C-heteroatom bond formation as well as oxidative and non-oxidative approaches in addition the book explores non-transition metal catalysts and metal-free catalytic systems and presents selected types of functionalization of sp³ C-H bonds pertaining to substrates other than alkanes this important resource presents a guide to the most recent advances concerning the syntheses of valuable functionalized organic compounds from alkanes contains information from leading experts on the topic offers information on the catalytic functionalization of alkanes that allows for improved simplicity and sustainability compared to current multi-stage industrial processes explores the challenges inherent with the application of alkanes as starting materials for syntheses of added value functionalized organic compounds written for academic researchers and industrial scientists working in the fields of coordination chemistry organometallic chemistry catalysis organic synthesis and green chemistry alkane functionalization is an important resource for accessing the most up-to-date information available in the field of catalytic functionalization of alkanes
