The Paracord Bullwhip 2014-07-27 whip spiders amblypygi can be large and terrifying animals with strong raptorial pedipalps and long antenniform first legs that can produce a span of as much as 60 cm others are small and scarcely span 5 cm they all lead a secretive nocturnal life and are extremely dangerous to other arthropods and small vertebrates in contrast to spiders and scorpions they are of no commercial economic or medical importance and they are difficult to study in the field because of their nocturnal habits possible reasons why they have been greatly neglected until recently by scientists and naturalists whip spiders represent an old group that dates back to the carboniferous period their partly primitive and partly derived morphological characters and habits make the study of these animals interesting while observation of their behaviour greatly increases our knowledge and understanding of arachnids in general in this book the author describes their morphology and systematics their life history their fascinating sensory biology their complex mating dances and reproductive biology and their ecology and distribution thus he has made a significant contribution to a better

understanding of the morphology and biology of the arachnida as a whole whip spiders is an outstanding contribution to science and it will be of interest for anyone with an interest in arachnida and for those keeping and breeding spiders
