safety science research evolution challenges and new directions provides a unique perspective into the latest developments of safety science by putting together for the first time a new generation of authors with some of the pioneers of the field forty years ago research traditions were developed including among others high reliability organisations cognitive system engineering or safety regulations in a fast changing world the new generation introduces in this book new disciplinary insights addresses contemporary empirical issues develops new concepts and models while remaining critical of safety research practical ambitions their ideas are then reflected and discussed by some of the pioneers of safety science features allows the reader to discover how contemporary safety issues are currently framed by a new generation of researchers brought together for the first time includes an introduction and guide to the development of safety science over the last four decades features an extraordinary collection of expert contributors including pioneers of safety research reflecting the evolution of the discipline and offering insightful commentary on the current and future state of the field serves as an invaluable reference and guide for safety professionals and students from any established disciplines such as sociology engineering psychology political science or management as well as dedicated safety programmes some figures in the ebook are in colour

Decision Analysis 2021-02-19

this book pulls together many perspectives on the theory methods and practice of drawing judgments from panels of experts in assessing risks and making decisions in complex circumstances the book is divided into four parts structured expert judgment sej current research fronts the contributions of roger cooke and the classical model he developed process procedures and education and applications after an introduction by the editors the first part presents chapters on expert elicitation of parameters of multinomial models the advantages of using performance weighting by advancing the random expert hypothesis expert elicitation for specific graphical models modelling dependencies between experts assessments within a bayesian framework preventive maintenance optimization in a bayesian framework eliciting life time distributions to parametrize a dirichlet process and on an adversarial risk analysis approach for structured expert judgment studies the second part includes roger cooke s oration from 1995 on taking up his chair at delft university of technology one of the editors reflections on the early decade of the classical model development and use a current overview of the theory of the classical model providing a deep and comprehensive perspective on its foundations and its application and an interview with roger cooke the third part starts with an interview with professor dame anne glover who served as the chief scientific advisor to the president of the european commission it then presents chapters on the characteristics of good elicitations by reviewing those advocated and applied the design and development of a raspberry pi course for sej and on specific experiences with sej protocols with the intention of presenting the with embedded linux

in japan s nuclear disaster and the politics of
safety governance florentine koppenborg argues
that the regulatory reforms taken up in the wake
of the fukushima disaster on march 11 2011
directly and indirectly raised the costs of
nuclear power in japan the nuclear regulation
authority resisted capture by the nuclear industry
and fundamentally altered the environment for
nuclear policy implementation independent safety
regulation changed state business relations in the
nuclear power domain from regulatory capture to
top down safety regulation which raised technical
safety costs for electric utilities furthermore
the safety agency s extended emergency
preparedness regulations expanded the allegorical
backyard of nimby demonstrations antinuclear
protests mainly lawsuits challenging restarts
incurred additional social acceptance costs
increasing costs undermined pronuclear actors
ability to implement nuclear power policy and
caused a rift inside the nuclear village small
nuclear safety administration reforms were in fact
game changers for nuclear power politics in japan
koppenborg s findings contribute to the vibrant
conversations about the rise of independent
regulatory agencies crisis as a mechanism for
change and the role of nuclear power and
interest in decarbonizing our energy supply

radioactive wastes are waste types containing radioactive chemical elements that do not have a practical purpose they are sometimes the products of a nuclear processes such as nuclear fission however other industries not directly connected to the nuclear industry can produce large quantities of radioactive waste for instance over the past 20 years it is estimated that just the oil producing endeavours of the us have accumulated 8 million tons of radioactive wastes the majority of radioactive waste is low level waste meaning it has low levels of radioactivity per mass or volume this type of waste often consists of used protective clothing which is only slightly contaminated but still dangerous in case of radioactive contamination of a human body through ingestion inhalation absorption or injection the issue of disposal methods for nuclear waste was one of the most pressing current problems the ~~2023-01-23~~ ~~19/25~~ ~~initial nuclear industry~~ ~~19/25~~ ~~when trying~~ ~~to establish a long term energy production plan~~ ~~exploring~~ ~~raspberry pi~~ ~~interfacing to~~ ~~the real world~~ ~~with embedded~~
