**Indiana Agricultural Statistics** 2013-06-27 given that the extremely elaborated and dynamic functions performed by the nervous system require the close synchronization of brain cells complex organisms have developed different mechanisms of intercellular communication at this regard paracrine signaling between neighboring cells is currently recognized as one of the most widely distributed mechanisms of synchronization in the brain parenchyma in mammals paracrine signaling is in part mediated by single membrane channels formed by connexins connexons hemichannels or pannexins pannexons which are two different membrane protein families composed of about 20 and 3 members respectively single membrane channels formed by these proteins serve as aqueous pores permeable to ions and small molecules allowing the diffusional exchange between the intra and extracellular milieu thus connexin hemichannels and pannexons permit the release of significant quantities of autocrine paracrine signaling molecules e g atp glutamate nad adenosine and pge2 into the extracellular milieu as well as the uptake of small molecules an increasing body of evidence has revealed that connexin hemichannels and pannexons play a crucial role in a plethora of brain processes including blood flow regulation ca2 wave propagation memory consolidation glucose sensing and cell migration and adhesion considering the multiple cell signaling functions of these channels their dysregulation is proposed not only as potential pathological biomarker but it has been implicated in the pathogenesis and progression of diverse brain diseases e g meningitis alzheimer s disease and stroke the aim of this research topic is to gather a collection of original research articles method protocols short communications opinions perspectives as well as review articles providing the latest progress and insights in the field of connexin hemichannels and pannexons in the nervous system within this volume we plan to cover from basic research including channel structure regulation pharmacology and trafficking to different biological functions in the physiology behavior plasticity neurogenesis blood flow control neuron glia crosstalk cell migration and differentiation as well as in the pathophysiology neuroinflammation mutation related diseases glial dysfunction and neurodegeneration of the nervous system we hope that this collection of articles will serve to understand how the signaling of connexin hemichannels and pannexons influences both normal and pathological brain function

**Former Yugoslav Republic of Macedonia** 2013-06-13 how is information stored and retrieved from long term memory it is argued that any systematic attempt to

answer this question should be based on a particular set of specific representational assumptions that have led to the development of a new memory theory the connectivity model one of the crucial predictions of this model is that in sharp contrast to traditional theories the speed of processing information increases as the amount and complexity of integrated knowledge increases in this volume the predictions of the model are examined by analyzing the results of a variety of different experiments and by studying the outcome of the simulation program conn1 which illustrates the representation of complex semantic structures in the final chapter the representational assumptions of the connectivity model are evaluated on the basis of neuroanatomical and physiological evidence suggesting that neuroscience provides valuable knowledge which should guide the development of memory theories

Coordination, Organizations, Institutions, and Norms in Agent Systems IX 2023-04-28 the charter of fundamental rights of the european union enshrines the key political social and economic rights of eu citizens and residents in eu law in its present form it was approved in 2000 by the european parliament the council of ministers and the european commission however its legal status remained uncertain until the entry into force of the treaty of lisbon in december 2009 the charter obliges the eu to act and legislate consistently with the charter and enables the eu s courts to strike down eu legislation which contravenes it the charter applies to eu member states when they are implementing eu law but does not extend the competences of the eu beyond the competences given to it in the treaties this commentary on the charter the first in english written by experts from several eu member states provides an authoritative but succinct statement of how the charter impacts upon eu domestic and international law following the conventional article by article approach each commentator offers an expert view of how each article is either already being interpreted in the courts or is likely to be interpreted each commentary is referenced to the case law and is augmented with extensive references to further reading six cross cutting introductory chapters explain the charter s institutional anchorage its relationship to the fundamental rights agency its interaction with other parts of international human rights law the enforcement mechanisms extraterritorial scope and the all important explanations

Advanced Sampling and Modeling in Molecular Simulations for Slow and Large-Scale Biomolecular Dynamics 2022-05-05 this book addresses the principle of proportionality which is currently one of the most important instruments of judicial review from both analytical and theory of law perspectives as such the analysis provided is far more comprehensive and can be applied to all areas of law not just constitutional law on the one hand the volume offers a broad perspective on several aspects related to proportionality such as its structure the balancing methodology and the distinction between rules and principles on the other it provides an innovative normativist and analytical approach to proportionality helping readers understand its structure and behaviour
