How Old Are You? Howard P. Chudacoff, 1992-02-16 Most Americans take it for granted that a thirteen-year-old in the fifth grade is behind schedule, that teenagers who marry too early are in for trouble, and that a seventy-five-year-old will be pleased at being told, You look young for your age. Did an awareness of age always dominate American life? Howard Chudacoff reveals that our intense age consciousness has developed only gradually since the late nineteenth century. In so doing, he explores a wide range of topics, including demographic change, the development of pediatrics and psychological testing, and popular music from the early 1800s until now. Throughout our lifetimes American society has been age-conscious. But this has not always been the case. Until the mid-nineteenth century, Americans showed little concern with age. The one-room schoolhouse was filled with students of varied ages, and children worked alongside adults.... [This is] a lively picture of the development of age consciousness in urban middle-class culture. --Robert H. Binstock, The New York Times Book Review A fresh perspective on a century of social and cultural development.--Michael R. Dahlin, American Historical Review

Re-theorising Learning and Research Methods in Learning Research Crina Damşa, Antti Rajala, Giuseppe Ritella, Jasperina Brouwer, 2023-09-22 Re-Theorising Learning and Research Methods in Learning Research explores the latest developments in the field of learning theory, offering an overview of emerging methods and demonstrating how recent research contributes to furthering understanding of learning. This book illustrates how theory and methods inform one another, facilitating advancements in the field, while addressing the ways in which societal and technological change create a need for adapting approaches to examining learning. Drawing on an international team of contributors, this book comprises 17 chapters and three commentaries, thematically organised into three broad sections: emerging theories and conceptualisations of learning and how they drive methodological development new methods or innovative use of existing methods and their contribution to theory development theories and methods that emerge in connection with societal changes Both novice researchers and

more experienced scholars will benefit from an overview of recent theoretical and methodological advances in the learning research field. This is an invaluable resource for researchers in the learning and educational research field and will also support Masters and PhD students to understand how learning theories and research methodology in the field have been evolving in recent years.

Monet's Minutes André Dombrowski,2023-10-03 A stunning exploration of the vital links between Claude Monet's Impressionism and the time technologies that helped define modernity in the nineteenth century *Monet's Minutes* is a revelatory account charting the relationship between the works of Claude Monet (1840-1926)--founder of French Impressionism and one of the world's best-known painters--and the modern experience of time. André Dombrowski illuminates Monet's celebration of instantaneity in the context of the late nineteenth-century time technologies that underwrote it. Monet's version of Impressionism demonstrated an acute awareness of the particularly modern pressures of time, but until now scholars have not examined the histories and technologies of time and timekeeping that informed Impressionism's major stylistic shifts. Arguing that the fascination with instantaneity rejected the dulling cultures of newly routinized and standardized time, *Monet's Minutes* traces the evolution of Monet's art to what were then seismic shifts in the shape of time itself. In each chapter, Dombrowski focuses on the connections between a set of Monet's works and a specific technology or experience of time, while providing the voices of period critics responding to Impressionism. Grounded in exceptional research and analyses, this book offers new interpretations of key works by Monet and a fresh perspective on late nineteenth-century art, society, and modern temporality.

Futurehype Bob Seidensticker,2009-02-18 Most people feel certain that the pace of technological change increases exponentially. They think that the Internet and personal computers are only the most prominent of the many innovations that surge around us and that new ones arrive ever faster. They're certain that never before has the social impact of technological change been as profound or as pervasive as it is today. But they are wrong. The Internet isn't that big a deal. Neither is the PC. Abandon all technology and live in the woods for a week and see if it's your laptop you miss most. In fact, the technologies most important to us are the older ones - the car and telephone, electricity and concrete, textiles and agriculture, to name just a few. The popular perception of modern technology is inflated and out of step with reality. We overestimate the importance of new and exciting inventions, and we underestimate those we've grown up with. Change is not increasing exponentially. In fact, technology has disoriented and delighted for centuries. This book will attempt to recalibrate your thinking by looking at how technological change really happens....If people see technology more clearly, we would have a shrewder citizenry that would demand practical and constructive, rather than expedient or convenient, decisions from their politicians. They would be more able to analyze and discuss the relevant technology issues of the day - from the digital divide, to government support for space and other science programs, to national defense, to the value of computers in schools - and
